Rethink Assignments with AI

Energized by:
J. Scott Christianson
Trulaske College of Business, University of Missouri, Columbia, MO, USA

Looking for a fresh way to foster creativity and engagement in your classroom? Embrace AI tools to transform traditional assignments into opportunities for discovery and problem solving. Rather than treating AI as a challenge, use it as a tool to enhance critical thinking and real-world skills.

Imagine creating assignments where neither you nor your students know the answer in advance, making learning a journey of exploration. AI tools like ChatGPT can assist students in brainstorming, refining questions, and collaborating, helping them develop deeper insights and innovative solutions.

By incorporating AI-driven feedback, interactive assignments, and collaborative learning tools, you can create a classroom environment that sparks curiosity and builds trust. These strategies not only enhance student engagement but also prepare them for a future where AI integration is inevitable.
