### Redefining Experiences with the Metaverse Technology

#### **Energized by:**

Dr. Smita Singh, Director of Education

Assistant Professor, School of Hospitality, Metropolitan State University of Denver

The metaverse is reshaping hospitality education by transforming traditional learning methods into dynamic, immersive experiences. Students can virtually step into kitchens to master culinary skills, design intricate event spaces in 3D, or practice guest service interactions in simulated hotel scenarios—all without the constraints of physical resources. This cutting-edge approach bridges the gap between theoretical concepts and practical application, allowing learners to explore global destinations, understand cultural nuances, and adopt sustainable practices from within the classroom.

In Fall 2023, MSU Denver School of Hospitality became a trailblazer in Colorado by integrating the metaverse into event planning and hotel management courses, leading the way in **experiential learning innovation**. You can explore examples of this initiative through these videos:
